## 4 Concurrent Pre-Conference Tracks

### Track 3: Office Based Aesthetics for the Age Management Clinician\*

\*non-CME track

In conjunction with the American Academy of Medical Microneedling

In response to attendee requests for information on aesthetic protocols and treatments which are office based and can be done by non-board certified Age Management Clinicians either full time or as an adjunct to their existing practice, AMMG presents this track in conjunction with the American Academy of Microneedling. The decision not to accredit this track was made so that attendees could be provided with business tools as well as the science and medical information necessary to implement these procedures. The goal is not to make this track commercial but to give speakers in this niche area the leverage to openly discuss procedures and answer questions that could be severely restricted in an accredited environment.

### Track 4: Traumatic Brain Injury: A Clinical Approach for Diagnosis and Treatment

In conjunction with the Warrior Angels Foundation, a 501(c)(3) non-profit organization

It is evident that the traditional approaches to Traumatic Brain Injury (TBI) and Post Traumatic Stress Disorder (PTSD) are not working. Just look at the Sunday sports page or listen to the American Heroes Network. We are losing more and more people every day to the devastating effects of depression, anger, rage and suicide. So, what is the medical community really doing, if anything? In 2004, Dr. Mark Gordon started working on the premise that trauma to the head and/or body can cause disruption of neurosteroid and hormone production via chemical pathways. Additionally, trauma creates an inflammatory environment in the body that affects the chemistry in the brain. The combination of hormonal disruption and inflammation are at the root cause of impairment in cognition and behavior. This track will take you through the medical literature to disclose the cause and effects of TBI on brain functioning. Case reviews will be presented showing laboratory testing, interpretation, treatment and outcomes.
