

## Millennium-WAF TBI Project

My name is Jeremy Robinette. I joined the military in 2003 in the Army. During my 10 years in the service I was exposed to TBI, anxiety, depression, as well as PTSD.

Due to these injuries I was prescribed 3-4 medications, which did not help with my emotional, cognitive or physical functioning. In fact, these medications did not stop my attempting suicide on 3 times. Due to my progressive worsening of emotional stability I withdrew from friends and family, and started to progressively decline in college, I was unmotivated and felt like life was no longer worth living. In March, 2015. I was introduced to the Warrior Angels Foundation and Dr. Mark L. Gordon. I have now been in the program for about a year and a half and have achieved the following improvements: I witnessed my grades returning to normal and graduated in from The Ohio State University in May 2016, I found myself back in the gym and living life, relationships with family and friends were reestablished. I threw out all medications that were prescribed even though admittedly I never really took them, as they were not for me.

Based upon an 85 percent improvement in my condition using the treatment protocol, I highly recommend that you look closely at the program and protocols that the Millennium-Warrior Angel Foundation's TBI Project has to offer. Other veterans and active service personnel can benefit from this fresh approach. It is important to look at the results before judging it as unsubstantiated science, since it is all based upon science that has been written about but not read. The answers and means for helping us veterans is there.

Thank you

Jeremy A. Robinette
