

Millennium-WAF TBI Project

My name is Kyle Franks. I joined the military in 2001 in the Marine Corps. I served in the infantry, with three tours to Iraq. During my five years of active duty in the service, I was exposed to a mortar attack in which the explosion knocked me to the ground. On a separate tour, I ran over an improvised explosive device (IED) with a vehicle. In 2015, I noticed that I was forgetting important things regularly. My body started going numb and tingly at random. I ended up in the ER twice for the numbness. I started having severe migraines that affected my ability to work.

Due to these injuries I was placed on migraine medication by my personal doctor which did not help with my emotional, cognitive or physical functioning. Due to my progressive worsening of emotional stability, I was unable to keep gainful employment and my family life and my personal life were negatively impacted.

In May, 2016 I was introduced to the Warrior Angels Foundation and Dr. Mark L. Gordon. Through their non-profit and professional experience, they placed me on a supervised protocol to treat Traumatic Brain Injury (TBI). I have now been in the program for seven months and have achieved the following improvements:

I stayed on the protocol for approximately four months. I chose to stop taking the protocol for a short period of time because I didn't notice a quick drastic change, and I wasn't convinced that it was helping. In short, I was impatient. Little did I know, I was actually improving while on the protocol. During that short period when I stopped the protocol, I noticed a significant decrease in my mental ability to focus, I started forgetting things again, my numbness, depression, and anxiety drastically increased. Andrew Marr and Dr. Gordon were notified and they placed me back on protocol. Since being back on the treatment/protocol, my numbness and migraines have been greatly reduced. I am remembering things much better, and I am functioning as a regular human being again. I haven't had to take the migraine medication since being placed in Dr. Gordon's treatment. My depression and anxiety have improved as well. Andrew Marr and Dr. Gordon's protocol have significantly improved my quality of life. I am greatly appreciative and I am still on the treatment plan.

Millennium-WAF TBI Project

Based upon a 75-80% percent improvement in my condition using the treatment protocol, I highly recommend that you look closely at the program and protocols that the Millennium-Warrior Angel Foundation's TBI Project has to offer. Other veterans and active service personnel can benefit from this fresh approach. It is important to look at the results before judging it as unsubstantiated science, since it is all based upon science that has been written about but not read. The answers and means for helping us veterans is there.

Thank you,

Kyle Franks
